

INRECO LAN
INTELLIGENT SOFTWARE FOR YOUR BUSINESS

**"Digital twins" for you to model
technological processes and save
resources**

Inreco LAN,
the software development company

Current conditions for doing business

Tough times call for smart decisions. The speed of the business development or production expansion is no longer a priority; the focus now is on the accuracy of the solution and the efficiency of resource use.

The main thing is the reliable and efficient use of resources.

Reliance on software solutions

One of the available and necessary ways to use the resources wisely and efficiently is to rely on IT. Anything that can be digitized needs to be digitized.

Our experience, for example, shows how one of our clients saved a significant budget using our help in math and in software development.

«Clean Room» software model

Inreco LAN specialists conducted research and then developed software based on a mathematical model for our industrial client. The app allows you to simulate the processes of air movement in the so-called "clean room". A clean production room must meet the strict requirements for air purity, temperature and air speed.

Smart and economical work

Using our simulation model, the client could calculate and recalculate, model and rework the project and floor plan for high-precision production over and over again, without paying a penny for the design and construction from real materials.

Analytics and s/w development

Such a software model is called a Digital Twin of the real object. However, building a digital twin is just an example of more general approach. Generally, in current times of austerity and prudence, turning to professional analytics and professional software development services is seen as a must for any business and manufacturing enterprise.

Ready to work with you on your projects

It is time for collaboration. We here have more than 40 well-educated software developers, some of them with strong scientific background. Inreco LAN with its 30+ years' experience in IT market is located in a small city of Vladimir near Moscow. Our specialists form a friendly, responsible and flexible team ready to solve complex problems for our clients.

Ready to work with you on your projects

The reliability of Inreco LAN is approved by its more than 30 years of experience in the IT market. We have hundreds of successfully completed projects and happy customers from Switzerland, the USA, Netherlands and Great Britain in our portfolio.

Inreco LAN with its **impressive experience** (<https://inrecolan.com/uploads/inrecolan-profile.pdf>) **and very reasonable prices** is an example of the optimal software development service provider for Swiss mechanical engineering and electrical companies.

Thank you for your time!
Stay safe and healthy!
